

FLOR-S

Radio-controls with 4.5 million billion combinations.

433.92 MHz rolling code system with self-learning function and sequential code for multiple insertion (Flor-sc).

The ideal solution for the management of multi-use systems with a unique and personal code: the self-learning receivers can receive and store up to 1,020 codes.

Using the BUPC palm-top device, the **Flor-sc model** makes it possible to memorise entire packs in one operation, without even having to open them.

Rolling code transmission: **absolutely secure** because it's impossible to clone the transmitter.

Self-learning function: the codes can be entered at a distance with an authorised transmitter or with a programming button on the receiver while a LED displays the different functions.

A drop in consumption but greater independence. Low battery warning via Leds.

The Flor-s system includes:

Transmitters with 1, 2, 4 channels.

Universal **receivers** with 1 or 2 channels, universal modular, plug-in or for universal outdoors IP53, with step-by-step, timer and anti-burglar functions.

The **aerial** can be incorporated in the Lucy flashing light or in the outdoor IP53 receiver, or fixed with a bracket.
